TEXT:

...Communications has signed on with ad network Engage Technologies to
 serve Unicast's rich media "*superstitial*" advertising across Web sites
 subscribing to the Engage network.

Unicast's *superstitials* are rich media ads that can be authored in a
 variety of creative formats, including...

...interstitial and pop-up advertising schemes that interrupt Web surfers as they visit sites, a *superstitial* ad pre-loads in its entirety in the background during surfing idle periods.

The first *superstitials* using Engage's ad-targeting solutions are expected to roll out in first quarter 2000...

...s profile-driven ad technologies and database of 35 million-plus anonymous user profiles. Additionally, (*superstitials* will leverage Engage's AudienceNet, a Web-wide, profile-driven advertising and marketing network.

"We...

...side for a while, but this is the first collaboration that will actually profile-enable *superstitials*," said Kathleen Kreis, director of strategic communications at Andover, Mass.-based Engage.

The partnership, being...

...recently inked deals with ad networks Flycast, Adsmart and NetGravity and will not only increase *superstitial* reach, but result in more tracking data being fed back to Unicast.

"Not only can advertisers buy a *superstitial* from a network and get one report against it, but now they can also target those *superstitials* and fully maximize the creative potential of the *superstitial*," claimed Allie Shaw, vice president of marketing at New York-based Unicast.

According to Kreis...

...targeted by content. In addition, a Millward Brown Interactive study reported that 66 percent of *superstitial* viewers remembered having seen the brand advertised compared to 32 percent for banners.

Very *Superstitials*? Online Ads Are 08/17/99 >BY Brian O'Connell.

TEXT:

NEW YORK CITY, NEW YORK, U.S.A., 1999 AUG 17 (NB) What are *superstitials* and why are people saying such great things about them?

Superstitials, those non-banner rich media ads that come in sizes as small as postage stamps...

...are making big waves these days. Users seem to like them for their relative unobtrusiveness -- *superstitial* engineers use a "polite" delivering system that only brings a Web advertisement into view after... "streamed" online ads.

Now the Web advertising industry is beginning to get some data on *superstitials* that they can sink their teeth into. According to New York-based Millward Brown International, *superstitials* are three times more effective in meeting online advertisers' goals than traditional Web banner ads...

...Internet Web page advertisements.

The three-month long study found that among those who viewed *superstitials*, advertising awareness of the brand was more than double that of the banner-ad viewers (66 percent of *superstitials* viewers remembered having seen the brand advertised online verses 32 percent of banner ad viewers). 55 percent of the participants who viewed the *Superstitial* ads interacted with the ad for up to 30 seconds, while 55 percent of the...

...the ad at all.

In addition, three times as many participants elected to interact with *superstitial* ads for 31 seconds or more (12 percent) than did with interstitials (4 percent). Furthermore...

...22 percent of respondents to 11 percent) to purchase the advertised product after having viewed *superstitial* ads than interstitial ads.

"We knew there would be some increased awareness developed from *superstitials* - but these initial results are far more dramatic than we expected," said Rex Briggs, executive vice president of Millward Brown Interactive.

That, industry observers say, bodes well for *superstitial* technologies down the road. "The advent of rich media, publisher-friendly formats such as *superstitials* are essential for the continued growth of online advertising," said Rich LeFurgy, chairman of the...

Strong Growth of *SUPERSTITIAL*(TM) Rich Media Ad Solution Leads to Doubling of

Unicast Staff, Tripling of Sales and...

...ramp-up driven by the rapidly increasing number of Web sites and advertisers utilizing its *SUPERSTITIAL*(TM) rich media ad solution, Unicast (<http://www.unicast.com>) announced today that it has...

...and Investor Relations and the corporate finance and accounting functions.

"The rapid acceptance of the *SUPERSTITIAL* has enabled Unicast to move to the next level, attracting professionals from leading advertising and...

...CEO Richard V. Hoppie. "Unicast's continued growth not only underscores the attractiveness of the *SUPERSTITIAL* to advertisers for their campaigns and to sites for creating new revenue streams, but it...

...financings.

Unicast officials additionally reported that the company has doubled its staff since launching the *SUPERSTITIAL* format earlier this year, attracting top professionals from across the advertising and Internet industries. In...

...Unicast has tripled its sales and marketing departments to meet the increasing demand for the *SUPERSTITIAL*. Team members recently joining Unicast's San Francisco and New York offices bring expertise from...

...Masters of Business Administration in Finance from the Harvard Graduate School of Business Administration.

About *SUPERSTITIALS*(TM)

The *SUPERSTITIAL* is the non-banner rich media format that can be any size (from a postage stamp to full-screen) and can be authored in most any creative format. *SUPERSTITIALS* are non-streaming, rather "pre-cached," to guarantee ad-playback performance. As such, *SUPERSTITIALS* allow advertisers to use a larger creative canvas to deliver compelling TV-like advertising while...

...Web publishers no degradation in their users' experience. Because they are pre-cached, guaranteed impressions, *SUPERSTITIALS* are "the only site-friendly rich media solution for advertisers" available today.

Abstract (Basic): WO 9960504 A1

NOVELTY - ~~**Advertising** tag (40) contained in web page (35) when executed by browser (7), causes browser to download from server (15), media file forming a predefined **advertisement**, during browser idle time intervals. The downloading is suspended during each interstitial interval after the user instructs browser to navigate to a new content web page.~~

USE - In networked client-server environment such as Internet, to download ~~**advertisement**~~ in a manner transparent to user.

ADVANTAGE - While a fully down loaded ~~**advertisement**~~ is interstitially played from browser cache, the new content page is downloaded over the full bandwidth of the communication link. Since ~~**advertising**~~ HTML files are not embedded within a web page, ~~**advertiser**~~ benefits in terms of both inserting ~~**advertisements**~~ into web page files and later changing the ~~**advertisements**~~ and hence labor, time and cost is saved.

DESCRIPTION OF DRAWING(S) - The figure shows the high-level block diagram of client-server distributed processing environment.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
CA 2272509	A1	E	34	G06F-013/38	

Abstract (Basic): CA 2272509 A1

NOVELTY - The program product stored on a computer readable medium initially execute a detection operation of a ****tag**** in an ****advertising**** banner. This ****tag**** is located in the ****URL**** of an Internet message which can communicate with a computer over an external communication link. The tag is then logged with the computer, and communicated to a remote site.

USE - For accessing advertising that is communicated to sites over the Internet.

ADVANTAGE - The system allows the insertion of a tag into an Internet site without the need to be intrusive, or require extra software such as decoding software. However, the system allows a much greater degree of information regarding sites to be obtained.

DESCRIPTION OF DRAWING(S) - The figure is an overall view of the system according to the invention.

US 5999912	A		7	G06F-017/60	Provisional application US 9616674

Abstract (Basic): US 5999912 A

NOVELTY - A set of advertisements that match the characteristics defined in ad tag are scanned. One of the matched advertisements is selected to display at location associated with ad tag. A web page code defining display and link characteristics is generated for selected advertisement, and is sent from server to client for display by browser program.

DETAILED DESCRIPTION - A request from web page is received from client by a server. The coded information defining requested web page is accessed. Then, it is judged if the coded information includes ad tags. Each ad tag defines an associated location on web page for advertisement and characteristics by advertisements that are displayed at that location. An INDEPENDENT CLAIM is also included for computer program.

USE - For managing advertisements on WWW pages in network system.

ADVANTAGE - Minimizes number of advertisers per web page and number of advertisements on web page, while minimizing number of viewers for each advertiser, since web page for a site is made more attractive by changing web pages on internet.

DESCRIPTION OF DRAWING(S) - The figure shows flow chart of advertisements scheduling and displaying method.

PRIORITY: 75559 [US 75559], US (United States of America), May 04, 1998 (19980504)

ABSTRACT

PROBLEM TO BE SOLVED: To enable tracking by generating a JAVA ****applet**** ****advertisement**** banner and distributing print contents by performing a process for formatting a printable page at a request from a user agent.

SOLUTION: The user of a user system 14 transfers a request to a web page 20 through an IP (****network****) 16 by using a web browser 24. A web server 18 receives the request from the web browser 24 through the IP ****network**** 16 and packages and transfers a web page 26 and an applet 28 to the web browser according to the web page 20 and applet 22 stored on a host system 12. After the web page 26 and applet 28 are downloaded, the web browser 24 can display the web page 26 to the user of the user system 14 and execute the applet 28.

Ad Networks Flycast, DoubleClick Expand Rich Media Options.

Electronic Advertising & Marketplace Report, v13, n21, pNA

Nov. 2, 1999

Language: English Record Type: Fulltext

Document Type: Magazine/Journal; Trade

Word Count: 442

TEXT:

Working with ad management companies and rich media technology provider Unicast Communications, ad networks Flycast and DoubleClick have set plans to completely integrate Unicast's "superstitial" ad technology into their ad serving approach.

Superstitials, Unicast's rich media vehicle, differ from other forms of interactive advertising in that they download solely when a user is between sites. The ads, which typically take up about 100K, only play when they've been completely downloaded. Superstitials can be run in whatever shape or screen location the advertiser wishes.

Superstitial delivery is controlled by a Java applet *downloaded* into the user's browser. The *applet* talks to the *ad* management system, and the ad management service "tells" the applet which ads to *download*, based on whatever user targeting system the management system has in place.

To roll out this new service, the ad networks will work with participating ad management vendors Adsmart and NetGravity. Both vendors will now support the tracking of superstitial ad responses, turning out reports that integrate both rich media response data and non-rich banner response data.

The new initiative proposes to solve an irritating problem faced by marketers placing rich media ads. To date, most advertisers have had to work with two sets of reports every time they ran a rich media campaign, one from the rich media company and one from the ad management company.

"The lack of integrated reporting with third party ad servers has been a thorn in the side of agencies since the ad servers were invented," says Richard Hopple, chairman and chief executive officer of Unicast (New York). "No agency wants to have to pick up two reports and do integration themselves. Agencies are overworked, and anything that adds labor or slows down service to the client is less than desirable."

For Flycast, the agreement is just one of a series of developments moving the company further in the direction of rich media.

Since going full-tilt into rich media delivery over a year ago, the Flycast Network has delivered over 800 rich media campaigns from 150 advertisers. Today, over 40% of the ads delivered via the Flycast Network contain rich media elements of some kind, the company said.

Flycast's supporting ResponsePoint program allows advertisers to translate static ads into interactive formats such as Macromedia Flash and Shockwave, HTML and Java.

The company's Flycast MediaNet already allows advertisers to run Flash-enabled ads and track Flash click-through rates.

DoubleClick, which recently completed its merger with NetGravity, is in the process of merging with information services and direct marketing giant Abacus Direct (EAMR, June 28).

Banner ads enlivened -- Service allows merchants to sell wares directly from Web ads

Kerstetter, Jim; Dodge, John
PC WEEK , May 4, 1998 , v15 n18 p10, 1 Page(s)
ISSN: 0740-1604

Provides a profile on a new service being offered by Communications Corp. that will let Web merchants sell products directly from their banner advertisements. Says Narrative, a year-old Waltham, MA startup company, will launch its Enliven/Impulse service with Web retailers 1-800-Flowers Inc., Eddie Bauer Inc., and Godiva Chocolatier Inc. running ads on it. Explains the software service network, which acts as a Web *advertising* middleman, uses Java *applets* in the banners to initiate direct sales and impulse purchases. Adds Narrative plans to port Enliven to other third-part commerce systems later this year. Concludes the Enliven/HardCopy printing service, uses the same technology as the Enliven/Impu service, and fees will be assigned according to the number printed. Includes one screen display. (EB)

Visualizing traffic on the World Wide Web

Markatos, Evangelos P; Papathanasiou, Athanasios E; Papadakakis, Nektarios

WebNet Journal , June 1, 1999 , v1 n2 p57-65, 9 Page(s)

ISSN: 1522-192X

Product Name: Palantir

Discusses traffic on the Web. Describes Palantir, a visualization tool that can be used to display the origin, volume, and type of the incoming requests of a Web server. States the tool is written in Java and can be accessed through a regular Web browser without any need for special software. Explains that it overlays the *URL* requests on top of a geographic map in order to reveal information about the geographical location of the clients of a given Web server. Displays the traffic animation in a realtime animated mode so that users can easily spot overloads and pinpoint their location on the map. Presents the high-level design and interface of Palantir, its structure, its implementation, related work, and the summary of the study. Concludes that Palantir can be useful to a range of people that use the Internet, including company *executives*, Webmasters, and *advertising* agents. Includes one diagram, 11 screen displays, and a list of references. (CT)

Detailed Description

English Abstract

...an interstitial basis, in response to a click-stream generated by the
 user. An HTML *advertising* *tag* is embedded into a referring web page.
 This tag contains two components. One component effectively...

...decouples" advertising content from a web page such that a web page,
 merely includes an *advertising* *tag* that refers, via a *URL*, to a
 specific AD management system. The AD management system selects the given
 advertisement that...

Detailed Description

... distinguish this tag from other HTML tags, will also be referred to
 hereinafter as an "*advertising* *tag*") into a referring page. This tag
 contains two components. One component effectively downloads, from a...

...to a user click-stream. The other component is a reference, in terms of
 a *web* *address*, of the advertising management system from which the
 advertising files are to be downloaded. This...

...than embedding actual advertising content within the page itself -- as
 conventionally occurs, merely includes an *advertising* *tag* that
 refers, via a *URL*, to a specific ad management system rather than to a
 particular advertisement or its content...executes under the browser, it
 is not under the control of the browser itself.

The *advertising* *tag* is itself embedded in a content web page and
 references a JavaScript file. The *advertising* *tag* also encapsulates a

reference, i.e., a *URL* to a specific ad management server, typically sited on a third party advertising server, containing...

...who displays, with his(her) browser, the HTML coding for that page. In particular, the *advertising* *tag* references a JavaScript file (which contains a "script") stored on a distribution server. When the...

...form the Transition Sensor applet, into the retrieved web page content in lieu of the *advertising* *tag*. Subsequent execution of these tags, by the client browser, invokes the Transition Sensor applet.

In...

...Sensor applet then passes the URL of the ad management system, as specified in the *advertising* *tag*, to the AdController applet in order for the ...next navigated (particularly if the user reached that page through a hotlink displayed in the *advertisement*). Subsequently, the AdController *applet* uploads the log entries to the advertising server. These entries will be collectively processed, as...Internet to the client PC and require no user-assisted installation.

Another portion of the *advertising* *tag* ("AdServer="http://AdManagement-system") references a *URL* of a particular ad management system (where "AdManagement system" represents a *web* *address* (*URL*) of that particular system), here illustratively system 25, from which the agent is to download...

...advertisement. As will be seen below, the Transition Sensor applet, during its execution, passes this *URL*, as part of an advertising download request, to the remainder of the AdController agent to...

...need to be inserted by content providers into each referring web page in lieu of *advertising* *tag* 40. Unfortunately, Transition Sensor applet 210 identifies both the agent server, and an actual advertisement in terms of a *URL* of its source components (through contents of an "AdDescriptor" file - which will be discussed in...e.g., ad management system 25, specified in advertising tag 40. This request contains the *URL* of the ad management system contained in *advertising* *tag* 40. Currently, Java applets are restricted under constraints inherent in the Java programming language itself...symbolized by line 1060, the Transition Sensor passes, as discussed above, a request containing an *Internet* *address* of an advertisement management system to the AdController applet to download an AdDescriptor file, for an advertisement, from that address. This address is specified in *tag* 44 of *advertising* *tag* 40 and, as symbolized by dashed line 1050, incorporated into the request. Thereafter, the Transition...

...terminates its execution until the browser next encounters, interprets and executes a content page containing *advertising* *tag* 40 at which point the Transition Sensor applet is re-loaded and re-started; and...

...if necessary, and then load it. Thereafter, this thread executes block 1130 to obtain the *Internet* *address* is of an advertising management system (e.g., system 25 shown in FIGs. 1B and 1C, 2A and 2B, and 10) in *tag* 44 from *advertising* *tag* 40.

As shown in FIG. 11, in response to a Start Transition Sensor applet event...the API configures the Ad Pipeline such that advertisement downloading is disabled whenever the AdController *applet* is playing an *advertisement*. Furthermore, as symbolized by block 1350, the API configures the Ad Pipeline such that advertisement...

Advertising: Does the Client Want Service or a Relationship or Both?

Mandeville, Aimee

Advantage (Nashville, TN, US), V8 N6 s1 p59

PUBL DATE: 851000

WORD COUNT: 1,524

DATELINE: Nashville, TN, US

TEXT:

...what Southern Hospitality was seeking.

The increased demand for marketing expertise reflects the swing from *execution* to definition as the starting point for campaigns. According to Ron Bartels, "*execution* without the stance of a creative platform is meaningless. Unfortunately the price *tag* for *advertising* services is on artwork or copy -- the *execution* end of the process. But this is only the tip of the iceberg." This newly...
